JEs, In-charge in DHBVN.**

Memo No. Ch- 78/PED-154/R-APDRP/Sales Circular File

Dated: 20.02.2017

**Subject: Instructions to connect all system in domain along with the Mac-Binding  
for improving the system speed.**

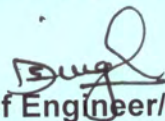

As you are aware that, the R-APDRP Part –A (IT) system has been implemented in 18 designated towns under DHBVN, with the objective to improve the customer services and to establish base line data for energy accounting/auditing using IT applications.

In view of the repeated complaints of system slowness being reported by the SDO offices from time to time, the following conscious decision has been taken to improve the system speed:-

1. In SDO offices, only 9 ports (8 for systems and one for printer) be enabled at switch level and all other extra ports be disabled.
2. In other offices, only 3 ports (2 for systems and one for printer) be enabled at switch level and all other extra ports be disabled except some Hartron site for read punching.
3. Connect all system in domain along with the Mac- Binding of the system.

For the implementation of the above instructions, the following points should also be brought to the notice of all concerned for careful and meticulous compliance:

- i. Don't use HUB to extend LAN connections, as it will choke the bandwidth and operations will be interrupted. If required to extend the LAN connection use LAN cable or D-Link switch only.
- ii. Don't disturb the Antivirus (Trend Micro) installed on the systems for security reasons.
- iii. Supply of Network racks must be through UPS only.
- iv. Don't connect the any extra system without information of DC network team.
- v. Don't replace LAN cable with another computer without information of DC Network team.
- vi. Don't format the systems which are on domain of R-APDRP system.
- vii. Don't disturb the site Network equipments without information of DC Network Team.
- viii. All system H/W, network racks must be kept clean and dust free.
- ix. Don't try to use any objectionable H/W i.e CD-ROM/External USB Drive etc in the R-APDRP system
